Automotive Power Electronics Team
Stuttgart

Stuttgart, 8 October 2026

Application: Working Student / Master Student Internship – MATLAB/Simulink Modeling & Power Supply Innovation (Job ID Flex-WD226486)

Dear Automotive Power Electronics Team,

Good power electronics starts with good models: reusable simulation environments that let engineers compare converter concepts quickly before building anything. Your MATLAB/Simulink Modeling & Power Supply Innovation role is exactly where I want to apply my studies. I am an M.Sc. Electrical Engineering student at the University of Stuttgart with coursework in power electronics, power systems and battery modeling.

Your posting asks for initial experience in MATLAB/Simulink, SPICE or programming. I bring MATLAB, Python and PSpice (certified through TVS India). In a university team project on battery cell modeling, I simulated how electrical, thermal, aging and manufacturing tolerances spread cell behaviour, and I implemented and debugged statistical parameter sampling in the model. That meant building a model that others could rerun with different parameters, which is close to the reusable modeling environments you describe.

During my one-year internship at FocalSystech, I designed and validated electronic circuits, created PCB layouts in Altium and supported prototype bring-up. I also automated tests in Python and embedded C. This hardware experience helps me judge whether a model matches what a real board will do. It is also useful for your work on gate-driver power supplies and integrated PCB transformer solutions.

I should be honest about the gaps. I have used MATLAB but have not yet built models in Simulink, and I have not worked on resonant converters or EMC filter design. I am keen to learn these from your engineers, and I have the control theory and power electronics coursework to build on. My English is fluent. My German is at A2 and I am preparing for the telc B1 exam; I would gladly use the German courses Flex offers.

I can work up to 20 hours per week alongside my studies and am happy to agree a start date. I look forward to discussing how I can support your team.

Kind regards,

Vineeth Raghav Gururajan
