Flex
Automotive Value Engineering Team
Stuttgart

Stuttgart, 8 October 2026

Application: Working Student / Master's Student – Automotive Electronics & Electric Mobility Innovation

Dear Automotive VAVE Team,

Your team improves the electronics behind battery management systems, inverters and DC/DC converters by evaluating alternative components and simplifying designs without losing performance or reliability. That is the kind of engineering I want to learn from, so I am applying for your working student position. I am an M.Sc. Electrical Engineering student at the University of Stuttgart, focusing on power electronics, battery modeling and power systems.

Your role centres on evaluating components against requirements, and I have done this in practice. During a one-year internship at FocalSystech, I evaluated and selected electronic components against technical requirements, designed and validated circuits, and created PCB layouts in Altium. I then supported prototype fabrication, bring-up and validation. This means I am used to working from schematics, datasheets and assembled PCBs, and to checking whether a design actually performs as intended.

I also have a practical sense of optimisation. In my final-year project, I replaced a Kogge–Stone adder with a Han–Carlson adder to cut area and power while keeping the same function. At university, a team project on battery cell modeling taught me how electrical, thermal, aging and manufacturing tolerances change a cell's behaviour. I see the same trade-offs of cost, size and risk against performance in your work.

I should be clear that I have not worked in value engineering or sourcing before, and I do not want to claim otherwise. I bring a solid technical base, an analytical way of working and the curiosity to learn the commercial and supply-chain side from your experts. My English is fluent. My German is currently at A2 and I am preparing for the telc B1 exam. I would value the German course Flex offers.

I can work up to 20 hours per week alongside my studies and am happy to agree a start date. I look forward to discussing how I can contribute to your team.

Kind regards,

Vineeth Raghav Gururajan
