Application: Working Student Software Development – CAD/CAM Manufacturing

Dear Refactum Team,

Quoting and process planning for job shops depends on software that can read CAD data and reason about how a part will be machined. Building that software, with code that goes into production, is the kind of work I want to do alongside my studies. I am an M.Sc. Electrical Engineering student at the University of Stuttgart, and I would like to join you as a working student.

You ask for solid Python and for CAD familiarity. I have both. During a one-year internship at FocalSystech, I automated testing and performance analysis in Python and embedded C, which reduced manual effort, and I also built a Python NLP project using a Siamese neural network. On the CAD side, I have worked with Altium Designer for PCB layout, supporting prototypes from layout to fabrication and validation, and I have used AutoCAD, CATIA and NX. I am comfortable reading and creating technical drawings and models, and working with the geometry behind them.

I should be clear about what is new to me. I have not yet worked with CAM, toolpath planning or CNC machining, and I have not used OpenCASCADE or computational geometry libraries. I learn new domains quickly, and I am interested in manufacturing technology. My engineering background, particularly in simulation and statistical modeling from a battery cell project, helps me approach machine simulation methodically.

I am enrolled at a German university and can start tomorrow, 15 October 2026, working up to 20 hours per week, fully remotely. My English is fluent, and my German is at A2, so I would prefer to work in English, which your posting allows. I would be glad to show you my code or talk through a short task.

Kind regards,

Vineeth Raghav Gururajan
