Application: Working Student – Testing (m/f/d)

Dear Hiring Team,

Electric mobility depends on reliable high-voltage components, and that reliability is earned on the test bench. That is where I want to contribute. I am an M.Sc. Electrical Engineering student at the University of Stuttgart, focusing on power systems, power electronics and battery modeling, and I am applying for your Working Student – Testing position.

During a one-year internship at FocalSystech, I brought up and validated hardware prototypes, designed circuits and PCB layouts in Altium, and defined CAN, SPI, I2C and UART interfaces. Most relevant to this role, I built **Python** and embedded C test automation that substantially reduced manual test effort. I want to bring that experience to your test-bench setup, test specification and validation-tooling work.

At university, I study power electronics and battery systems. In a team project, I simulated cell-to-cell variance arising from electrical, thermal and aging tolerances. The project taught me to work carefully with measurement data and tolerances, which is central to judging whether a component passes or fails.

To be transparent: my English is fluent and my German is currently at A2. I am preparing for the telc B1 exam and can produce test reports and technical documentation reliably in English from day one.

I can start immediately with up to 20 hours per week during the semester and full-time during semester breaks, and I am happy to plan on-site days in Munich flexibly.

I look forward to discussing how I can support your testing team.

Kind regards,

Vineeth Raghav Gururajan
